

Employee Management System (EMS)

Project Overview

This project demonstrates the implementation of an Employee Management System (EMS) using Oracle Database. The project covers database design, SQL queries, views, procedures, triggers, functions, and scheduler jobs.

Project Components

Design

- ERD Design.
- Mapping.
- Normalization.

Implementation

- DML Operations.
- Aggregation Functions.
- JOIN Queries.
- Subqueries.
- Views.
- Functions.
- Procedures.
- Triggers.
- Scheduler Jobs.

Results

All required tasks were implemented and tested successfully. The database objects were created and executed as expected.

Conclusion

The project provided practical experience in Oracle Database development, including database design, programming, automation, and data management.
